How we approached this?

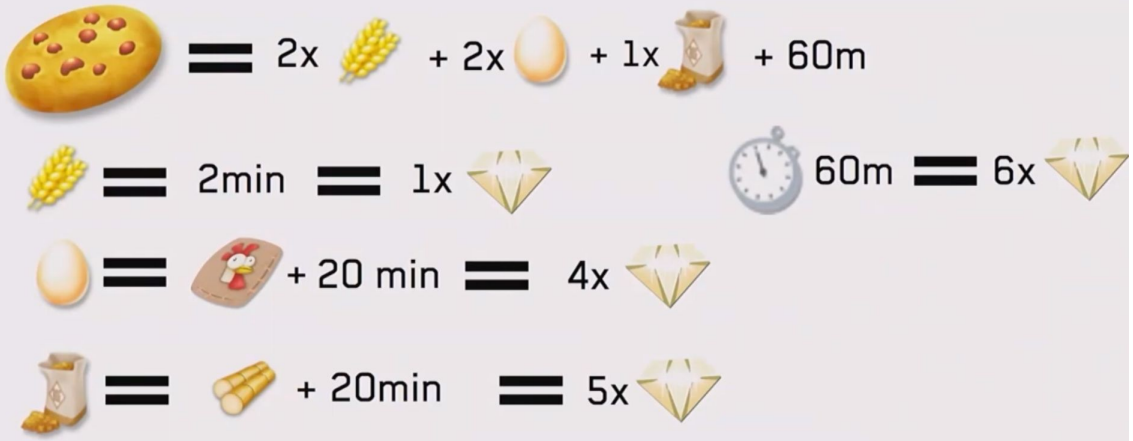

Time is Diamonds!

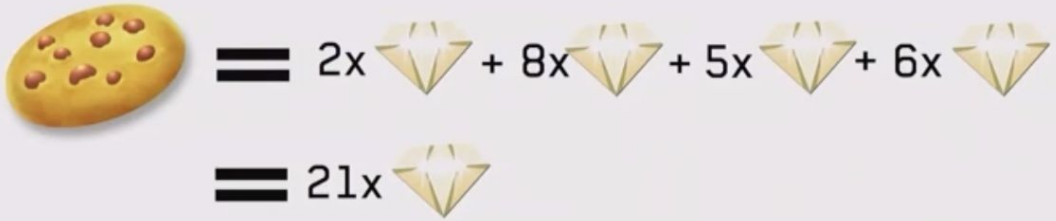

Assign **Diamond Value** to each good, based on:

i) Production time
ii) Value of the ingredients

GDC GAME DEVELOPERS CONFERENCE® | MARCH 19-23, 2018 | EXPO: MARCH 21-23, 2018 #GDC18

= 2x + 8x + 5x + 6x

= 21x

COIN VALUE = A x DIAMOND VALUE XP VALUE = B x DIAMOND VALUE

= 54x + 52x

The Diamond Value was also used as a tool to *generate the orders*:

1. Each order has a **Target Diamond Value**
2. Order is generated by adding 1-6 random goods up to the Target Value
3. Spice up the reward!

Note: Markets are two-sided!

purchases = # sales

Players want to buy stuff..

... but how to make players sell?

Our approach in Hay Day:

1) Limited storage capacity *and* goods cannot be trashed

2) Players gain certain materials *asymmetrically*

Players are divided to groups:

Group 1:			Group 2:			Group 3:		
								
57%	30%	13%	30%	13%	57%	13%	57%	30%
